THE RADIATOR

The method of construction of the J2 radiator and materials used were exactly the same as in the later TC series. Even the pattern of the flutes on the top header tank are the same.

The key difference is the fins attached to the flutes for cooling. While the TC has horizontal fins, the J2 has "Honeycomb" or Hexagon fins.

If you have an old radiator from your J2 and if it needs a new core, a local radiator shop should be able to take a TC radiator and your old J2 radiator and re-build you a good radiator.

EDITOR NOTE - SPARES SOURCE -

As usual there is no claim of responsibility for your dealings with any source that may be listed in these technical articles but a radiator source has been located. His ad was in the 1981 MMM Year Book. The source is:

VINTAGE RADIATORS
Great Central Way
Woodford Halse
Daventry
Northants
England

One English friend said that this supplier is good - and expensive
