

A PIECE OF FELT....

J2 TECHNICAL ARTICLE

Number 108

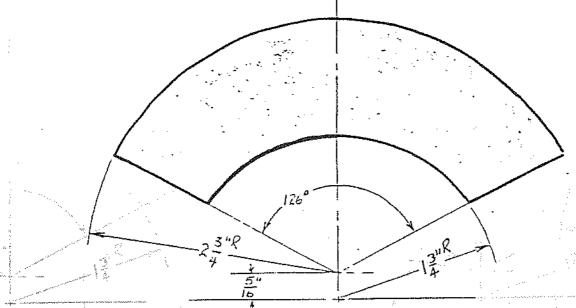

April 30, 1982

From Octagon Heaven

The inside of the remote gear changer, upper casting is lined with felt. The function of this piece is to catch dirt which falls into the cavity! Really I have not been able to determine any function other then looks, in other words a passenger looking down into the cavity does not see the inside of the casting.

I used some left over black tool box lining
material and it was about right. It took a
few trial and error attempts to make the piece
but once made correctly, it fit like a glove. I made a copy of my
piece and tied on some close diemsions for you. You will need to
make three knotches in the lower (smaller) radius for the bolt flanges.
You will see what I mean when you go to fit it.

If the reproductions are full size you can use the drawing below as a pattern for it is full sized.
