BATTERY COMPARTMENT LID CATCHES

The battery compartment lid which is the raised floor over the rear axle, is supported in place by a batten on either side. The compartment lid is 25" across. There is a leather lifting thong on the front edge center, held in position by two wood screws. In the center of each outside edge there are metal "turn buttons" which keep the lid from bouncing open. The original turn buttons were cast iron.

ORIGINAL MAT CAST IRON PAINTED BLACK.
