## LUBRICATION PLATES- BULK HEAD SUPPORTS

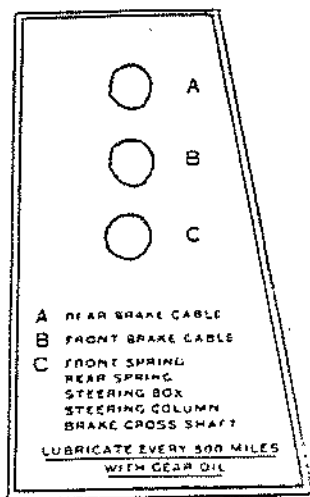

Just to help put questions behind us, the Telcalmite lubrication data plates are made out of brass with black engraved etched-in lettering.

They are mounted on the outside of the bulk head supports. The one marked A-B-C is the right hand (near side) and the one marked D-E-F is the left hand (far side).

The picture below shows the alignment of the lubrication tubes coming off of the back side of the data plates. When mounting the lube tubes to the bulk head/data plate there are special fiber washers places marked "X" below.
