DOOR PANELS AND SIDE POCKETS

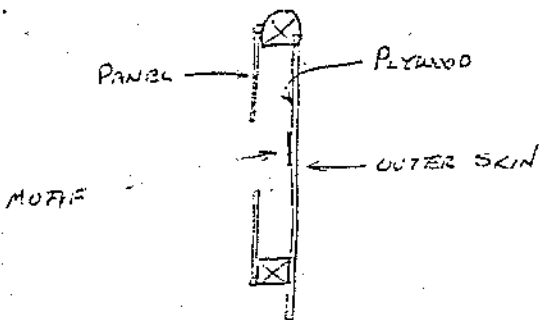

The door panels were made of hardboard, about 1/8" material, and covered with rexine.

There was a pocket in the door panel. A full sized layout of the pocket opening is found on the back side of this article.

The location of the pocket opening is as follows:

SECTION OF DOOR

The outside of the door is covered with plywood which is covered with the exterior metal skin.

On the inside of the plywood is glued the rexin and a M.G. Motif (rubber piece).

I am told that the rubber motif was placed under the rexin so the motif shows in relief.
