## LIGHTENING OF P AND N TYPE FLYWHEELS

We are indebted to Arnold Studley and Steve Dear for this drawing of how to lighten the flywheels of P and N-types. In spite of its scruffy appearance (well, it looked scruffy when I received it but our printers

may have cleaned things up a bit), it is said to be a works drawing. Steve says it has been done to his Cracker JB 3854 and is mentioned in the car's chassis file. The weight saved is about 9 lbs.
