STORAGE OF SIDE SCREENS AND HOOD

An English friend claims that there was originally a pocket tacked onto the back of the seat-back for storage of the side screens and hood when they were not in use.

This pocket was made out a black canvas and was the same size as the seat back.

The purpose was to help keep these items in place and keep them from being damaged by other items in the rear compartment.

HAND BRAKE LEVER FINISH

The hand brake lever and button were originally chrome plated. The balance of the lever assembly was painted chassis color.
