

Autumn Naviscat Sunday 1st October, 2023

Our last competition of the year is the Autumn Naviscat. These Naviscats are just a single step up from the well-known Treasure Hunts, just requiring the knowledge of how to plot a 6-figure map reference, using a romer or similar to locate the clues. You will need to bring a copy of the Ordnance Survey map 1987 – Dorking & Reigate, 2013 edition.

The start this year is at the Inn on the Green, Ockley, RH5 5TD, where entrants will sign on from 10.00am, and be given the Final Instructions. The clues will be handed out at 11.00am, and then there are 3½ hours to collect the answers, before finishing back at the pub at 2.30pm to hand in your answers, after which lunch will be served, for which entrants need to pre-order their food choices.

Once the clue locations are plotted, the crew make up their minds which route to take to collect the most points. These are given on the sheet alongside the questions, which are to be answered once you have arrived at the location. (e.g. how many bolts on the gate, or name the vicar). The more difficult the location and/or question determines the score, which range from 1-3 points. More experienced competitors will try to find the higher scoring answers. Two and three-point clues have a suitable area to park nearby, because you will have to leave your car to find the answer. If you are a novice it is probably better to visit the one-point “drive-by” locations. There is a prize for the best novice to encourage new entries.

Please note that it is physically impossible to visit every location provided in the time allowed and only your best 30 answers will be accepted under the rules.

We are combining this event with a round of the Inter Register Club’s championship, which will see entries from pre-war Rileys, Alvises, Austins, Humbers and Sunbeams, to add a bit of interest to the proceedings.

We look forward to meeting old friends and newcomers alike for an interesting day out. The Regulations and entry forms are included with this flyer.
