

Core plugs -how to make them-

It takes some patience, and you need a lathe, to make a core plug by yourself.

The advantage is, that you can use non rusting material, and you can get any exact size you want.

Depending on vault and size, the plug will expand about 0,7mm when fixing in the engine-block with a hammer. In case of a 28,6mm hole, I make plugs of 28,3mm.
